

Kanpur Bhraman - Backend API Documentation (MVP)

1. Public/User APIs

Places

GET /api/places

- Get list of all places

GET /api/places/:id

- Get details of a specific place

GET /api/places/search

- Filter/search by tags, category, age, etc.

Sample

query:

/api/places/search?category=park&tags=family,green&ageGroup=adult&entryFee=free&openNow=true

Reviews

GET /api/reviews/:placeId

- Get all reviews for a particular place

POST /api/reviews

- Submit a review (name + email required)

Sample POST body:

```
{  
  "place_id": "65f4e3cde...",  
  "name": "John Doe",  
  "email": "john@example.com",  
  "rating": 4,  
  "comment": "Nice and peaceful!"  
}
```

Trip Planner

GET /api/tripplan

- Suggest a list of places based on interests, time, etc.

Query example: /api/tripplan?hours=6&interests=heritage,parks

Weather (Optional)

GET /api/weather

- Fetch current Kanpur weather (cached if needed)

2. Admin-Only APIs

(Admin access should be protected via token/auth middleware)

Places Management

POST /api/admin/places

- Add a new place

PUT /api/admin/places/:id

- Edit an existing place

DELETE /api/admin/places/:id

- Delete a place by ID

Sample POST body:

```
{  
  "name": "JK Temple",  
  "description": "Peaceful Hindu temple",  
  "images": ["url1", "url2"],  
  "category": "temple",  
  "address": "Govind Nagar",  
  "map_link": "https://maps.google.com",  
  "opening_hours": "7AM-8PM",  
  "entry_fee": "Free",  
  "tags": ["spiritual", "historical"]  
}
```

Review Moderation (Optional)

GET /api/admin/reviews/pending

- Get all pending reviews (if moderation needed)

DELETE /api/admin/reviews/:id

- Delete inappropriate review

3. Optional/Future APIs

GET /api/auth/login

- Admin login (JWT-based auth)

GET /api/user/reviews/:email

- Get all reviews by a user (optional)

GET /api/places/top-rated

- Return only top-rated places

GET /api/places/nearby

- Suggest nearby places based on user location
