

Kanpur Bhraman – MVP Document (v1.0)

1. Core MVP Features

1. Landing Page: Real-time weather, date, and city intro.
2. History Page: Static content with Kanpur's culture and heritage.
3. Tourist Places Listing: Multiple images, description, timing, fee.
4. Filter & Search: By type, age, timings, fee, tags.
5. Integrated Map: Shows user location and distance to place.
6. Trip Planner: Auto trip suggestion based on available time.
7. Review System: Name + Email required to submit reviews.
8. Top Rated Sorting: Most reviewed places shown first.

2. Database Schema

Table: places

- id (Integer, PK)
- name (String)
- description (Text)
- images (Array[String])
- category (String)
- address (String)
- map_link (String)
- opening_hours (String)
- entry_fee (String)
- tags (Array/Text)
- average_rating (Float)
- review_count (Integer)

Table: reviews

- id (Integer, PK)
- place_id (Integer, FK to places)
- name (String)
- email (String)
- rating (Integer)
- comment (Text)
- timestamp (DateTime)

3. Data Collection Strategy

1. Use Google Maps, Wikipedia & UP Tourism for place data.
2. Collect fields: Name, Description, Address, Timings, Fee, Tags, Map Link.
3. Use royalty-free or custom images (e.g., Unsplash, Imgur).
4. Create demo reviews initially, later enable form submission.
5. Use OpenWeatherMap API for weather info.

4. Suggested Tech Stack

Frontend: React + Vite + Tailwind CSS
Backend: Node.js + Express.js
Database: MongoDB (Atlas)
Map: Google Maps API
Weather: OpenWeatherMap API
Hosting: Vercel (frontend), Render/Fly.io (backend)

5. Project Folder Structure

```
kanpur-bhraman/  
├── client/ (React Frontend)  
│   ├── pages/ [Landing, History, Places, TripPlanner]  
│   ├── components/ [PlaceCard, ReviewForm]  
│   └── utils/ [weatherAPI.js]  
├── server/ (Node + Express Backend)  
│   ├── models/ [Place.js, Review.js]  
│   ├── routes/ [places.js, reviews.js]  
│   └── controllers/
```

6. Roadmap

Phase 1: Planning & Setup
- Define core features and finalize tech stack.

Phase 2: Database Design
- Build schema for places and reviews.

Phase 3: Data Collection
- Gather data using tourism portals and APIs.

Phase 4: Development
- Frontend pages and backend APIs setup.

Phase 5: Testing & Feedback
- Add dummy data, collect feedback.

Phase 6: Deployment
- Host frontend on Vercel and backend on Render.
